ORO ADVERTISING & MARKETING DIRECTORY

DISPLAY, EXHIBITION & SIGNAGE SYSTEMS

DEAR CLIENT

Thank you for this opportunity to supply you the Oro Advertising and Marketing Directory.

You may be wondering what the name Oro means, **Oro means in Spanish "Gold"**, and we strive to make our products and service as valuable to you as gold and your experience with us golden!

The Oro directory contains a great range of Display, Exhibition and signage systems for all your marketing, advertising and signage needs.

All the systems in this directory have been proven worldwide to be of the highest quality; many of these display systems have been designed and manufactured by one of the worlds most respected display manufacturer, Mark Bric Display (Sweden).

At all times we are endeavouring to provide you the best service possible with orders delivered on time!

For further information please do not hesitate to contact us

Best Regards

CONTENTS

ORO FACTS

1. Gold is the most malleable and ductile metal; a single gram can be beaten into a sheet of one square meter, or an ounce into 300 square feet. Gold leaf can be beaten thin enough to become translucent. The transmitted light appears greenish blue, because gold strongly reflects yellow and red.
2. Gold is very dense, a cubic meter weighing 19300 kg. By comparison, the density of lead is 11340 kg/m³, and that of the densest element, osmium, is 22610 kg/m³.
3. The gold content of gold alloys is measured in carats (k), pure gold being designated as 24k.
4. In medieval times, gold was often seen as beneficial for the health, in the belief that something that rare and beautiful could not be anything but healthy.

IN MEDIEVAL TIMES,
GOLD WAS OFTEN SEEN
AS BENEFICIAL FOR THE
HEALTH, IN THE BELIEF
THAT SOMETHING THAT
RARE AND BEAUTIFUL
COULD NOT BE ANYTHING
BUT HEALTHY.

ORO FACTS

5. Gold has many uses and applications including electronic sliding contacts in highly humid or corrosive atmospheres, and in use for electrical contacts with a very high failure cost (certain computers, communications equipment, spacecraft, jet aircraft engines) remains very common, and is unlikely to be replaced in the near future by any other metal.
6. Although the price of some platinum group metals can be much higher, gold has long been considered the most desirable of precious metals, and its value has been used as the standard for many currencies (known as the gold standard) in history.
7. Gold has been used as a symbol for purity, value, royalty, and particularly roles that combine these properties.
8. Gold in antiquity was relatively easy to obtain geologically; however, 75% of all gold ever produced has been extracted since 1910. It has been estimated that all the gold in the world that has ever been refined would form a single cube 20 m (66 ft) on a side (equivalent to 8000 m³).
9. Because of Gold's historically high value, much of the gold mined throughout history is still in circulation in one form or another.

BECAUSE OF GOLD'S HISTORICALLY HIGH VALUE, MUCH OF THE GOLD MINED THROUGHOUT HISTORY IS STILL IN CIRCULATION IN ONE FORM OR ANOTHER.

ORO FACTS

10. In 2001, global mine production amounted to 2,604 tonnes, or 67% of total gold demand in that year. At the end of 2006, it was estimated that all the gold ever mined totalled 158,000 tonnes.
11. At current consumption rates, the supply of gold is believed to last 45 years.
12. Pure gold is nontoxic and non-irritating when ingested and is sometimes used as a food decoration in the form of gold leaf. It is also a component of the alcoholic drinks Goldschläger, Gold Strike, and Goldwasser. Gold is approved as a food additive in the EU (E175 in the Codex Alimentarius).
13. The world's oceans hold a vast amount of gold, but in very low concentrations (perhaps 1–2 parts per 10 billion).
14. Like other precious metals, gold is measured by troy weight and by grams. When it is alloyed with other metals the term carat or karat is used to indicate the amount of gold present, with 24 karats being pure gold and lower ratings proportionally less. The purity of a gold bar can also be expressed as a decimal figure ranging from 0 to 1, known as the millesimal fineness, such as 0.995 being very pure.

AT CURRENT CONSUMPTION RATES, THE SUPPLY OF GOLD IS BELIEVED TO LAST 45 YEARS.
